

Let Users Punchout Orders with JumpTech Barcode Scanners

If you subscribe to Jump Technologies, Inc. (www.jumptech.com/partners.html), you can give your ECinteractive or is.D-Force® 2 customers the option to use barcode scanners to shop your catalogs.

The simplicity of the scan-dock-checkout process reduces order errors. It appeals especially to prospects and customers who are decentralizing their procurement process. It may appeal to prospects who do not yet order online, perhaps due to the number of clicks to place an order.

How It Works

1. You can select from JumpTech's catalog of office products (provided by major wholesalers and buying groups). Or, you can upload custom item images and details.
2. You can give your customers the resulting barcode-enhanced catalogs (full-line or contract). You can provide barcode labels for their shelves or print & copy consumables.
3. Your customers install JumpTech client software at their locations. They configure it once to point to your site URL. (You can also set up client software at your dealership site for testing and/or retail use.)
4. Using your JumpCart™ barcode reader key fob, your customers can scan the barcodes for the items they want.
5. Your customers simply plug the JumpCart into the USB port of the PC where JumpTech client software is installed.
6. The JumpCart client software will prompt to save your customer's username, password, and department number to log in to your site (using special encryption technology).
7. On login, it automatically uploads scanned items into their shopping cart for review and checkout.

Getting Started

Becoming a JumpTech Distribution Partner

Contact JumpTech by email sales@jumptech.com or call 1-888-373-SCAN (7226) for information on the following products:

- Distribution Partner (with direct link into your ECinteractive/D-Force 2 site),
- Catalog-On-Demand, and/or
- A Sales Demo Kit.

For technical support of JumpTech scanners and software, email support@jumptech.com or call 651.287.6000.

Specifying Your Cart Handler Web Address for JumpTech Software Setup

You will need our cart processing Web address so that JumpTech systems and client software can transfer the orders into your system.

At least three people need this Cart Handler Web Address:

1. Your JumpTech representative needs it to set up your account in their system.
2. You need it to set up JumpTech client software at your site for testing and/or retail purposes.
3. Your customers need it to set up JumpTech client software at their locations.

The Cart Handler URL looks like your main Website address — followed by the filename ExternalPartnerHandler.ashx. In the following examples, the blank represents your account name or number:

https://www.ecinteractive.com/___/ExternalPartnerHandler.ashx

https://www.dforce2.com/___/ExternalPartnerHandler.ashx

For more details, see the online help topic, “About JumpTech Integration.”

Troubleshooting Punchout Orders

In the AdminSite menu of your Admin Control Panel, you can select the External Partner Log. In this grid, you can easily identify the chain of actions involved in a single process. You can also see items currently being stored in a temporary cart that have not posted to your backend system. For more details, see “Troubleshooting Punchout and Microsite Orders in the External Partner Log” on our Web site.
