

Proc File Commands that Do Not Work Under NT

If you create proc files for the NT platform, or are converting a proc file written for PGDOS so it will work on NT, you need to avoid certain commands and variables that do not work under NT. These commands and variables are listed below.

Note: For complete information on proc files, see “Proc File Basics” and “The Efficiencies of Using Proc Files”. Both of these documents can be found on the documentation CD-ROM, *What’s New in Versions 3 & 4*, under the heading **Handouts from Users’ Meetings**.

Commands that Do Not Work Under NT
