

Authorization Request for Third-Party C1 Report Designer

C1 Report Designer can be authorized free of charge in Ensight Pro Version 8.11 or higher to customers who need a third party reporting tool to access and report the SQL sales data.

In the process of developing the Price Modeling application for Version 8.11, ECI² developers utilized the Microsoft SQL Server 2000 engine to redefine Ensight Pro sales history tables and databases and generate an industry-standard relational, normalized database schema. In order to provide this new database to dealers, the Microsoft SQL Server 2000 Desktop Edition is packaged with the Ensight Pro server installation and configured during the install process. As a result, SQL data required for building Ensight Pro sales history reports is now available for use.

While MS SQL Server 2000 Desktop Edition gives ECI² the engine to host the SQL data to operate Ensight Pro applications, it does not feature a user interface for reporting and business intelligence. Until ECI² releases SQL formats for standard Ensight Pro reports and an interface to modify these reports, dealers can use any third party SQL reporting tool to access and manipulate the data. For example, some dealers who use Crystal Reports® or Microsoft® Access® can design and save their own reports from Ensight Pro SQL sales data.

As an alternative to the commercial examples above, ECI² makes C1 Report Designer available to Ensight Pro customers who are familiar with designing SQL queries and reports.

ECI² supports the accuracy and integrity of Ensight Pro's SQL data tables, as required to operate its applications. However, all third-party SQL reporting tools are outside the scope of ECI² Technical Support. They are designed for users who have experience creating SQL statements for relational databases. ECI² has no plans to support custom SQL statements or any third-party SQL reporting tool, including C1 Report Designer. ComponentOne®'s HelpCentral site (<http://helpcentral.componentone.com/>) offers documentation and a community forum to support C1 Report Designer, which is part of ComponentOne Studio® and ComponentOne Reports™ for .NET Designer Edition.

To authorize access to the third-party SQL reporting software, C1 Report Designer, within Ensight Pro™ Version 8.11 or higher, please follow these steps:

1. A principal of the dealership or company must sign below, signifying acceptance of terms.
2. Fax the signed form to ECI² Technical Support at: **682-831-9909**

Within three (3) working days of receiving the signed agreement, an ECI² representative will contact the dealer to complete the authorization procedure for C1 Report Designer within Ensight Pro.

I, the undersigned, acknowledge that I have read and accept these terms: that ECI² provides C1 Report Designer free of charge on an authorization basis to Ensight Pro customers, but will not support dealers' custom SQL statements or any third-party SQL reporting tool, including C1 Report Designer. I affirm that my company will rely on our own experience or resources in creating custom SQL statements, queries, and reports.
