

What's New in Dealer Station DDMS Edition 2.11

- **Preventing Pre-Allocation of Inventory**

You can prevent your Dealer Station orders from pre-allocating your inventory. You can choose to allocate the inventory as items are placed on an order, or wait for the order to be submitted and approved before allocating the inventory. For more information, see **Setting Up Dealer Station DDMS Edition Admin Pages, Chapter 5, Site Preferences on page 29.**

- **Setting Up System News for Multiple Accounts**

You can now set up system news for a specific range of accounts, instead of specifying news for each account. For more information, see **Setting Up Dealer Station DDMS Edition Admin Pages, Chapter 9, System News on page 73.**

- **Turning Off Today's Specials**

You can disable the Today's Specials page and banners for individual accounts. For more information see **Setting Up Dealer Station DDMS Edition Admin Pages, Chapter 7, Default User Settings on page 48 and Chapter 8, User Accounts on page 64.**

- **Requiring Requisition Numbers**

You can now specify whether you want to require requisition numbers. For more information see **Setting Up Dealer Station DDMS Edition Admin Pages, Chapter 7, Default User Settings on page 49 and Chapter 8, User Accounts on page 65.**

- **Replacement Items Enhancement**

When you set the Reference Item Action parameter to automatic, Dealer Station automatically places the referenced item on the order. A message appears indicating that the reference item has been added to the cart as the replacement item. For more information, see **Setting Up Dealer Station DDMS Edition Admin Pages, Chapter 7, Default User Settings on page 51 and, Chapter 8, User Accounts on page 66.**

- **Editing Prompts for Creating Accounts**

You can now edit the responses a new customer receives when clicking the Create an Account link on the home page. For more information, see **Setting Up Dealer Station DDMS Edition Admin Pages, Chapter 2, Site Text on page 12 (Link Text).**

- **Approving Non-Contract Items**

You now have the option of requiring approval for orders containing items that are not on the customer's contract. For more information see **Setting Up Dealer Station DDMS Edition Admin Pages, Chapter 7, Default User Settings on page 46 and Chapter 8, User Accounts on page 61.**

- **Budget Constraints Enhanced**

If a user with a P/O budget deletes the long P/O number on an order, he may be able to override the budget without authorization. You now have the option of preventing individual users from editing long P/Os, thus preventing them from overriding their budgets. For more information, see **Setting Up Dealer Station DDMS Edition Admin Pages, Chapter 7, Default User Settings on page 49 and Chapter 8, User Accounts on page 65.**

- **Secure Information Message**

A new message displays on the Checkout Page where customers enter their credit card information. This message assures them that the information they enter is secure. For more information, see **Understanding Online Purchasing (formally titled Using Dealer Station) Chapter 7, Checking Out on page 35.**

- **End User Online Help and Handout Modified**

The End-User handout and online help have been modified to remove references to DDMS. This change provides consistency for dealers who use their own branding of their Dealer Station sites. For more information, see **Understanding Online Purchasing (formally titled Using Dealer Station) or see the online help.**
