

What's New in Dealer Station DDMS Edition 4.02

- **Enhanced Favorites Management**

You can create a favorites list through Favorites Admin to assign globally or by account. You can also assign them by department within an account. Superusers can create favorites lists and assign them to all departments to which a member has rights. For more information, see **Chapter 10: Admin Favorites** in the handout, *Setting Up Dealer Station DDMS Edition Admin Pages*.

- **PSN Monitor**

Use PSN Monitor to oversee and review PSN transactions through Dealer Station. The PSN Totals page gives you an overview of your PSN activity, broken down by vendor, for today or for the month to date. You can see at a glance the number of successful transactions, as well as those that were incomplete or failed.

The PSN Transactions page shows details about each transaction, including items on the P/O. For more information, see **Chapter 16: PSN Monitor** in the handout, *Setting Up Dealer Station DDMS Edition Admin Pages*.

- **Signature Display**

Dealers using RouteTrak™ have access to detailed information for delivered orders. With a click, you can see in Dealer Station, the signature recorded at delivery.

- **More Icons**

Your catalog has more icons. These icons denote products' special features. For example, an icon might indicate a product is manufactured by a minority-owned company, or uses recycled materials, or can be customized.

- **Restricted Items**

When a customer tries to order a restricted item, he receives this message: "This item cannot currently be displayed. For more information, contact customer support." You can enable a link to your customer support department for easy one-click access.

- **Phone Numbers on Orders**

The phone number and extension are stored in the ZZZZ record on all reports.
